

eFormalizing

eFormalizing is the unique process created by Home Healthcare SOS, Inc. to convert your paper forms to interactive, electronic forms that are fully integrated with SOS Online.

The creation of an online form is a complex process that involves a number of steps. It is not as simple as just scanning in your paper forms or converting them to .pdf files in order to put them online for your use. If that is all that was done, you might be able to view your form online, but you would not be able to enter data on the form, save the data, or retrieve it for subsequent viewing or modification. The form would not be interactive.

In order to convert your paper form to a truly web-based, interactive, online form requires both computer programming and database work. In order for you to access a form, we need to add it to your site. You decide the menus on which the form should appear, and in which groups or packets it should appear for each field staff or office user. We do the additional site customization to make this happen.

This process of turning your paper forms into online, interactive forms that are fully integrated with your site is a valuable service we provide at little or no additional cost to you. We invest our time and resources because we believe that it will provide the greatest value to you as a client. We are betting that you will continue to use the application over an extended period of time because it is what you are defining as important to you.
